PROFESSIONAL SUMMARY

Software Engineer with 5+ years of experience building secure, scalable backend systems and high-performance APIs for financial services and healthcare, serving over 1 million users. Strong C#/.NET engineer with experience across .NET Framework and .NET 5+, building high-volume financial systems where reliability, correctness, and performance are critical. Architected and delivered a regulatory compliance platform in 3 months as sole backend engineer and project lead, and redesigned a bank statement generation service using asynchronous and parallel processing to significantly reduce latency. Experienced with distributed systems, system design, algorithms, design patterns, unit testing, and performance optimisation using xUnit and NUnit. Holds an M.Sc. in Information Technology from Carnegie Mellon University, with additional experience in applied AI research and usable privacy and security.

TECHNICAL SKILLS

Languages	C#, Python, TypeScript, JavaScript, SQL, PHP
Backend	.NET 8/.NET Core, ASP.NET Core Web API, REST & Microservice APIs, Entity Framework Core, NestJS, FastAPI
Frontend	React 19, React Native, TypeScript, React Hooks, HTML5, CSS/Bootstrap
Databases	SQL Server, PostgreSQL, Azure SQL, MySQL, MongoDB, Redis
Cloud & AI	AWS (Amazon S3, AWS Bedrock, Amazon Titan), Azure App Service, Azure Storage, Azure DevOps, LLM APIs
Architecture	REST APIs, Microservices, Clean Architecture, SOLID, Repository Pattern, Unit of Work, Event-Driven Architecture, Async Programming
DevOps & Practices	Claude Code (agentic dev), CI/CD (GitHub Actions, Azure DevOps), Unit Testing (xUnit, Moq, NUnit), Docker, Kubernetes, Serilog, Kibana (ELK), Git, Agile/Scrum

EXPERIENCE

Senior Software Engineer – IntelliNavix

June 2025 – Present

- Architected and developed the IntelliNavix professional training and career development platform end-to-end as sole engineer, designing the full-stack architecture in React 19/TypeScript, Bootstrap, and PHP/MySQL to serve UK professionals pursuing careers in data analysis, business analysis, project management, and agile methodologies.
- Designed and delivered the complete training operations subsystem, including course management, event registration, newsletter subscriptions, automated email notification pipelines via PHPMailer/SMTP, calendar invitation generation, contact management, and responsive, SEO-optimized interfaces.
- Owned the platform's ongoing technical direction and evolution, most recently architecting and integrating an in-app AI chat assistant that enables visitors to explore course offerings and receive instant answers.

Research Engineer – EPFL LiGHT Lab

Jul. 2025 – Oct. 2025

- Selected from the top 1.3% of Summer@EPFL applicants. Applied survival ML in Python (Cox, RSF, DeepSurv, N-MTLR) to a 9-centre, 2,630-patient hepatocellular carcinoma prognosis study, reaching OS C-index 0.752 and matching it (0.748) with a privacy-preserving federated Cox model that trained without centralising patient data. Research publication is underway.
- Built a Streamlit clinician-training platform integrating OpenAI, Anthropic, and Qwen LLM APIs for case-based learning by doctors in Rwanda, designing prompt routing across the three model providers, the case-content data flow, and the conversational interface.

Software Engineer – The Alternative Bank

Oct. 2022 – Mar. 2025

- Led the design and development of the Signatory Portal anti-money laundering compliance platform in C#/ASP.NET Core, delivering the full platform end-to-end in 3 months as the sole backend engineer and project lead, managing 2 frontend engineers and coordinating across compliance and product teams.
- Led a team of engineers in redesigning the bank's statement of account generation service, architecting asynchronous and parallel processing pipelines with thread-safe concurrent collections and cloud-based storage optimization, reducing end-to-end latency by approximately 4 minutes and enabling near real-time PDF bank statement delivery.
- Modernized the bills payment microservices of the core banking application during a platform migration, rewriting RESTful APIs, refining stored procedures, and strengthening query performance and transactional integrity controls to keep high-volume corporate payments consistent throughout.
- Co-built AltConnect (altconnect.ng) as one of 2 backend engineers responsible for the entire API layer of a live community management platform handling payments, collections, and reconciliation, with tools for events, fundraising, and a marketplace.

Software Engineer – Axxess Technologies

Jan. 2024 – Feb. 2025

- Maintained Axxess HomeCare, a large-scale legacy C#/ASP.NET Core MVC platform spanning 56 microservices backed by MySQL and MongoDB, serving US healthcare clients, working remotely in an Agile environment with a distributed team across the USA, India, Philippines, Botswana and Nigeria.
- Optimised inefficient MySQL and MongoDB queries to improve service responsiveness, resolved 40+ production issues using Kibana log analysis to trace root causes, and refactored legacy services for maintainability, hands-on operational excellence on a high-volume distributed platform.

Software Engineer – Sterling Bank Plc

July 2021 – Oct. 2022

- Designed and implemented a centralised structured logging framework for the SterlingPro Corporate Internet Banking project, eliminating logging boilerplate and reducing debugging time by 30% across distributed .NET services.
- Engineered and maintained high-performance C#/.NET Core APIs for Corporate Internet Banking and Trade Services applications, delivering secure B2B and B2C integrations for consumer and corporate banking platforms serving over 1 million users.

INDEPENDENT ENGINEERING PROJECTS

TaskFlowAPI | [GitHub](#)

June 2025 – Aug. 2025

Technologies: C# 12/ASP.NET Core, EF Core, SQL Server, Docker, Azure DevOps, xUnit, Moq

Built a production-grade task and project management REST API that enables secure user authentication, task assignment, project organization, progress tracking, and role-based collaboration using Clean Architecture, SOLID principles, Repository and Unit of Work patterns, JWT authentication, Entity Framework Core, and SQL Server, the project also incorporates automated testing with xUnit and Moq, structured logging with Serilog, Docker containerization, and Azure DevOps CI/CD pipelines to demonstrate production-ready backend engineering from development through deployment.

Bundesliga Wrapped – AWS World Sports Innovation Cup (2nd Place Globally) | [GitHub](#)

May – July 2026

Technologies: Python, FastAPI, React, AWS Bedrock, Amazon Titan, Amazon S3

As part of a 3-engineer team, built the backend AI and video processing pipeline for a Spotify Wrapped-inspired experience that transforms Bundesliga fan telemetry, match statistics, and multimedia content into personalized, interactive season summaries. Integrated AWS Bedrock foundation models, Amazon Titan embeddings, and Amazon S3 to generate AI-assisted narratives, retrieve contextual match highlights, and support the creation of shareable fan experiences while ensuring deterministic fallback mechanisms for reliable execution in environments without AI services.

SafeSpeak Ltd (Co-Founder) | [Website](#)

May 2025 - Present

Technologies: React Native, WebSockets, Gemini API, PostgreSQL

Co-founded SafeSpeak, an anonymous-first mental health and peer-support platform with AI-guided screening, voice-based support circles, licensed counsellor booking, and a built-in crisis escalation pathway. I lead the operations, handling compliance, recruitment, legal and contributing to development. I personally built the admin web portal for counsellors and peer supporters, contributed core mobile features including the group chat interface with WebSockets, and integrated the Google Gemini API to power the in-app AI guide.

FindAfriq (Finndex Africa) | [Website](#)

Oct. 2025 – Dec. 2025

Technologies: NestJS, TypeScript, MongoDB/Mongoose, JWT, Swagger/OpenAPI, AWS S3

Designed and developed the backend architecture and RESTful APIs for FindAfriq, a verification-first marketplace connecting users across Africa with rental and sale properties and vetted home-service professionals. Built over 25 modular backend features, including secure authentication, role-based access control, identity verification workflows, property and service listings, bookings, real-time messaging, payments, notifications, loyalty and referral programmes, and AWS S3 media management. Delivered a secure, scalable backend with Swagger documentation, request validation, rate limiting, and monitoring, powering both the public platform and role-based administration portal.

AWARDS & CERTIFICATES

- AWS World Sports Innovation Cup – Bundesliga Wrapped (Jul 2026): Team Outliers placed 2nd globally after a 7-week competition on real Bundesliga match data; built the Python generative-AI and video pipeline (Amazon Bedrock, S3, OpenCV).
- BlueDot Technical AI-Safety Course: completed (June 2026).
- Kubernetes & Cloud Native Associate (KCNA): Andela / Linux Foundation scholarship and exam voucher; certification in progress.

EDUCATION

Carnegie Mellon University – Master of Science in Information Technology, AI & Software Engineering

Aug. 2024 – May 2026

University of Lagos – Bachelor of Science (Hons) in Computer Sciences, Software Engineering

Jan. 2015 – Nov. 2019
